EXPERIENCE

Software Engineer

Oct 2024 - Present

DMW&H

Fairfield, NJ

- Refactored legacy SQL stored procedures into .NET Core microservices, leveraging MediatR and CQRS to coordinate complex data flows between an Angular frontend, Kafka event streams, and both SQL and MongoDB data stores.
- Led deployment of customer sites, configuring SQL Server databases, delivering new full stack features, and resolving integration bugs to ensure a seamless go-live for warehouses processing 15,000+ transactions daily
- Established comprehensive test coverage (70%+) using xUnit, by implementing repository pattern mocks and integration tests against test containers, resulting in CI-validated C# business logic
- Built real-time warehouse operations dashboard in Angular with SignalR WebSocket integration, consuming Kafka events triggered by PLC TCP messages to display live case-scanning activity across 15,000+ daily transactions with sub-second latency.
- Reduced CI/CD pipeline build time from an average of 30 to 3 minutes by implementing Docker layer caching and DockerHub registry caching, transforming deployment workflows from multi-hour processes to rapid iteration cycles.
- Eliminated manual setup bottlenecks by developing a Bash automation scripts for Linux VM provisioning, reducing site deployment time by 75% and ensuring consistent Docker configurations across all client hardware.

Software Engineer Intern

Feb 2024 – Sep 2024

BeeEnrolled

Remote

- Contributed to full-stack development of an E-learning platform utilizing Vue, Laravel, and MySQL, adhering to the Model-View-Controller (MVC) design pattern best practices.
- Implemented dynamic Open Graph metadata generation to optimize SEO and platform link-sharing previews, increasing user engagement metrics.

PROJECTS

Oyster | *TypeScript, React, Remix, Node.js, Redis*

Open-source Contributor

- Designed and developed an administrative feature allowing admins to edit and moderate resource content posted by all users, protecting content quality and accuracy while maintaining user permissions.

AI PDF Analyzer | *TypeScript, Next.js, AWS S3, PostgreSQL, Pinecone*

Sole Contributor

- Engineered a fullstack webapp focused on users uploading PDF documents to an S3 bucket which are scanned into vector embeddings and interpreted by an OpenAI model for users to chat with about the selected PDF document.
- Applied the Retrieval-Augmented Generation (RAG) technique in machine learning to convert PDF documents into vector embeddings and analyze them using vector similarity for AI-driven interactions.

TECHNICAL SKILLS

Languages: C#, TypeScript, SQL, Python, Java

Frameworks and Libraries: .NET, Node.js, Angular, React, Next.js, Vue, Laravel

Technologies: Linux, Docker, Kafka, Bash, PowerShell, MongoDB

Tools & Testing: Git, GitHub Actions, xUnit, Jest, Postman, Swagger

EDUCATION

Farmingdale State College

Farmingdale, NY

B.S. in Computer Science, Magna Cum Laude, GPA: 3.83

Aug 2024

Coursework: Data Structures and Algorithms, Object-Oriented Programming, Database Management, AI and Machine Learning, Operating Systems

CERTIFICATIONS

- Microsoft Azure Fundamentals (AZ-900)
