EXPERIENCE

Software Engineer II

Oct 2024 - Present

DMW&H

Fairfield, NJ

- Improved system maintainability by rebuilding product from SQL stored procedures to distributed .NET microservices, integrating Kafka, SQL Server, and MongoDB to support scalable event-driven processing,
- Led 4+ on-site deployments, serving as technical point of contact during UAT and go-live, diagnosing and resolving production issues across hardware integrations, infrastructure failures, and software bugs whilst under live operational pressure.
- Reduced p99 warehouse routing decision latency from 100ms to 20ms under peak load by refactoring synchronous message handling into an asynchronous Kafka-backed pipeline with in-memory caching.
- Developed an infrastructure deployment CLI in Go with Terraform-style plan/apply that replaced manually scripting Docker compose files, reducing stack deployment time by up to 90%.
- Reduced CI/CD pipeline build time from an average of 30 to 3 minutes by implementing Docker layer caching and DockerHub registry caching, transforming deployment workflows from multi-hour processes to rapid iteration cycles.
- Established 70% test coverage using xUnit with repository pattern mocks and integration tests against test containers, ensuring CI-validated C# business logic across all critical services.

Software Engineer Intern

Feb 2024 – Sep 2024

BeeEnrolled

Remote

- Contributed to full-stack development of an E-learning platform utilizing Vue, Laravel, and MySQL, adhering to the Model-View-Controller (MVC) design pattern best practices.
- Implemented dynamic Open Graph metadata generation to optimize SEO and platform link-sharing previews, increasing user engagement metrics.

PROJECTS

Oyster | TypeScript, React, Remix, Node.js, Redis

Open-source Contributor

- Designed and developed an administrative feature allowing admins to edit and moderate resource content posted by all users, protecting content quality and accuracy while maintaining user permissions.

AI PDF Analyzer | TypeScript, Next.js, AWS S3, PostgreSQL, Pinecone

Sole Contributor

- Engineered a fullstack webapp focused on users uploading PDF documents to an S3 bucket which are scanned into vector embeddings and interpreted by an OpenAI model for users to chat with about the selected PDF document.
- Applied the Retrieval-Augmented Generation (RAG) technique in machine learning to convert PDF documents into vector embeddings and analyze them using vector similarity for AI-driven interactions.

TECHNICAL SKILLS

Languages: C#, TypeScript, SQL, Python, Java, Go

Frameworks and Libraries: .NET, Node.js, Angular, React, Next.js, Vue

Cloud & Infra: Azure, AWS, Docker, Linux, Terraform

Tools & Testing: Git, GitHub Actions, xUnit, Jest, Postman, Swagger

EDUCATION

Farmingdale State College

Farmingdale, NY

B.S. in Computer Science, Magna Cum Laude, GPA: 3.83

Aug 2024

Coursework: Data Structures and Algorithms, Object-Oriented Programming, Database Management, AI and Machine Learning, Operating Systems

CERTIFICATIONS

- Microsoft Azure Fundamentals (AZ-900)
